

# Information Systems

## Products and Services

**Network Security Assessment:** MANTEC will review your present systems practices in network security and recommend improvements. The key issues assessed include:

- Virus Protection
- Physical Environment
- Mechanical Failure
- Policies
- Hacking Exposure
- File Permissions
- Back-up

**Website Assessment:** Your existing website will be evaluated from the standpoint of its current ability to position the company for on-line success, to persuade prospects to become interested, and to convert those prospects into customers. Benefits you can expect from a Website Assessment include:

- Crystallizing your company goals into a web strategy
- Receiving a gap analysis to learn where your company's web position is now and where it needs to be to achieve your goals
- A framework for site improvement
- A determination of your current search engine placement and suggested strategies to improve that placement

**Infrastructure Assessment:** Your current computer resources and information technology systems will be assessed. Upon completing the assessments we will align your computer technology needs with your business strategy and based on your requirements, we will provide you with options. The MANTEC Information Technology Infrastructure team will:

- Conduct on-site interviews with key management and information systems personnel
- Perform a review of current information systems hardware, software and practices
- Analyze the current system and identify improvement opportunities
- Recommend next steps to implement a value-added information systems strategy

**Network Penetration Testing:** The changes you make to your network on a day-to-day basis can increase the risk of compromise to your critical information and systems. Changes such as providing intranet access to a strategic partner, deploying new applications and implementing new technology can go undiscovered, introducing unacceptable levels of business risk into your environment.

- Find out exactly what potential security vulnerabilities are present on your network perimeter
- Get practical and relevant technical information on how these vulnerabilities can be fixed

To set up your Information Systems contact your Professional Business Advisor directly or MANTEC at 717-843-5054

# Information Systems

**Information Technology Contingency Planning:** Information Technology and Automated Information Systems are vital elements in most business processes. It is critical that the services provided by these systems are able to operate effectively without excessive interruption. Contingency planning supports this requirement.

**Report Design:** MANTEC will assist manufacturers to develop custom reports for enterprise wide systems using Crystal Reports software. From simple to complex reports using today's current database architecture, you can easily get the information you need to manage your business at the push of a key.

**Business Information Systems Facilitation Services:** A facilitated structured process will guide your company to select several suitable software solutions and provide you with an information infrastructure to ensure current and future business process needs are met - all supported by state-of-the-art technology. This process significantly reduces the spec development and short list evaluation time, saving you months of research. The process will also maximize your potential to improve and control business processes like customer service, inventory control and plant operating efficiency.

**Information Technology Strategy Planning:** A well-written Information Technology Strategic Plan will pave the way for your company to facilitate its computer changes and implementation. We will assist you to align your computer technology needs within your enterprise with your future business strategies.
